

WHAT A WASTE (?)

[Surplus construction material, it doesn't have to be a waste]

Reusing discarded materials from Australia's residential construction boom. A modular and flexible container collection system, localised around major residential construction zones, giving discarded and left over materials a second chance. Helping to reduce its already 40% contribution to Australia's total waste.

1 System, 6 different containers, 20 sectional pieces

Method of salvaging materials

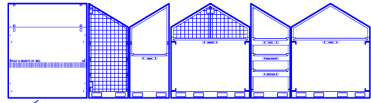

Collection

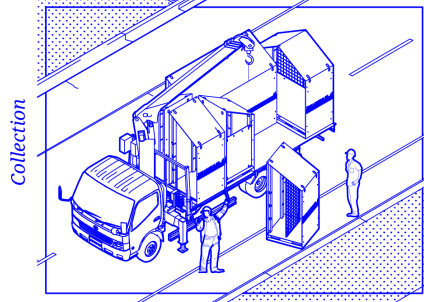

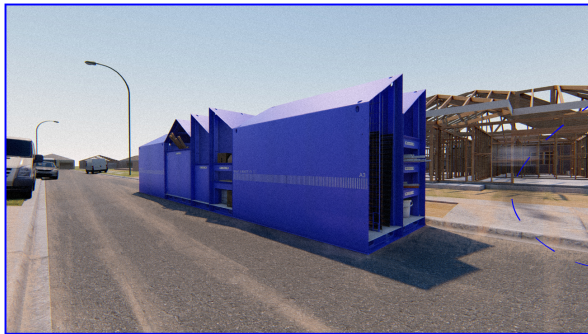

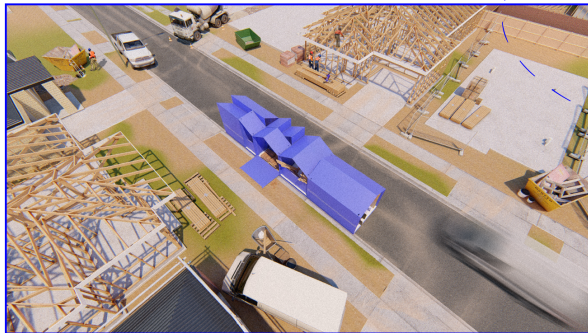

Recirculate

Reuse

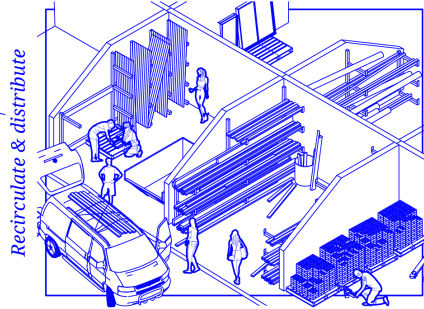

Collect the leftover materials, redistribute them back into a single point, reuse those remaining materials

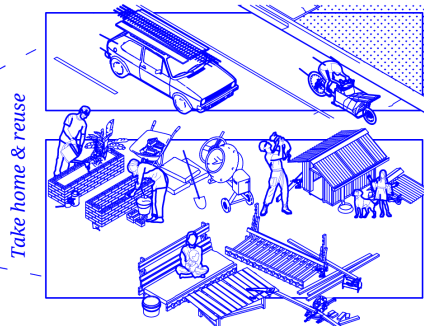

Customise and build for different materials

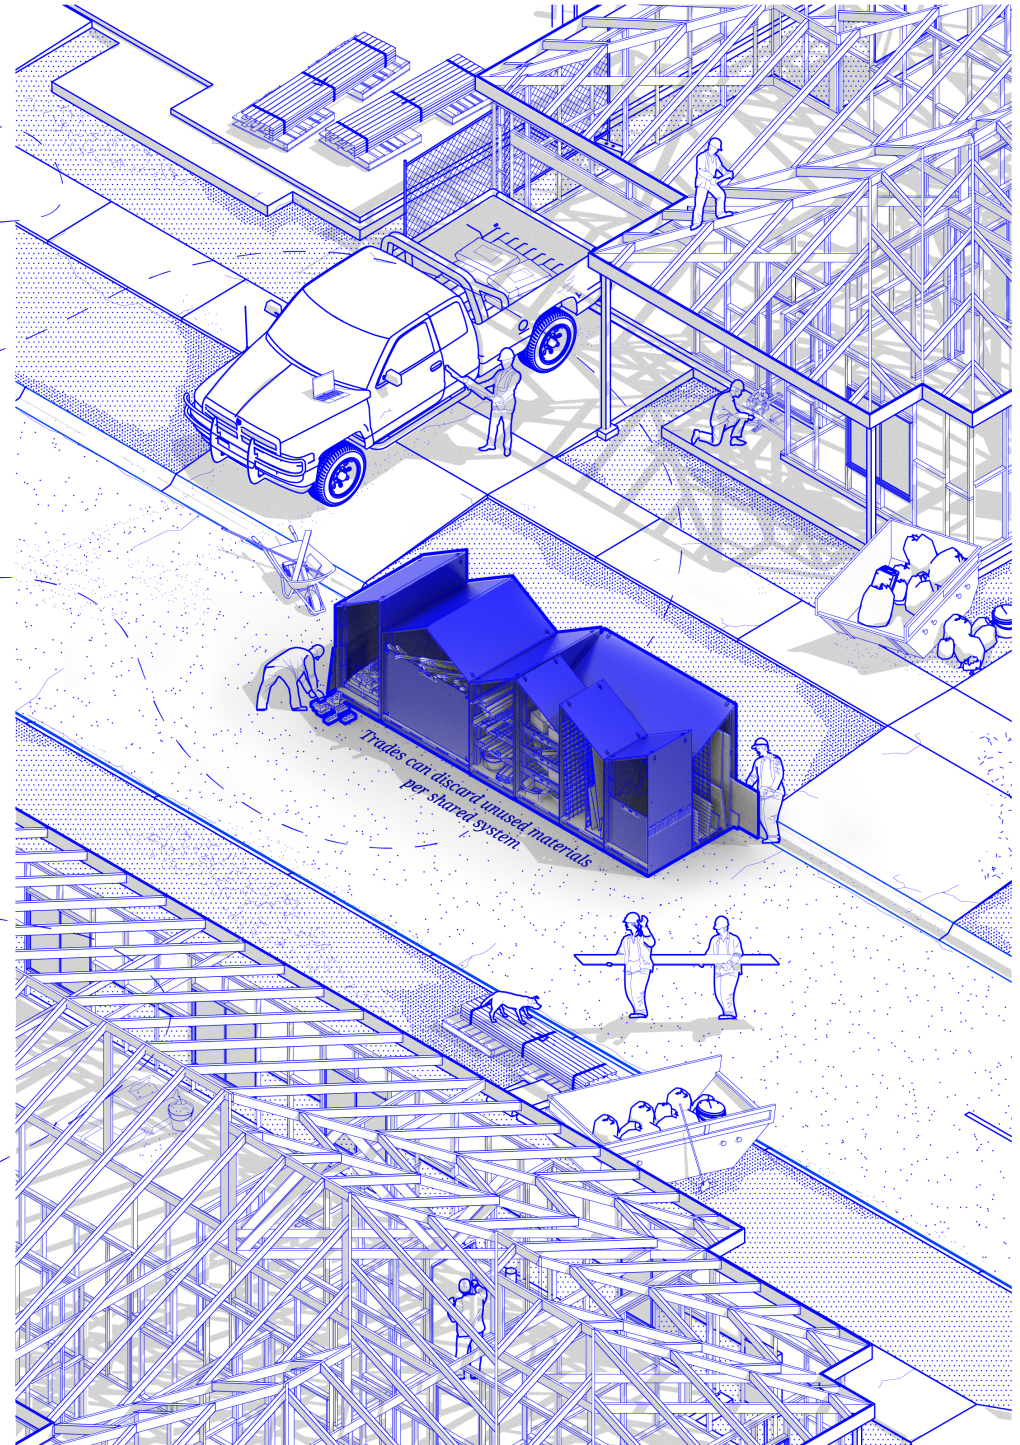

Collection

Recirculate & distribute

Take home & reuse

Trades can discard unused materials per shared system
